

Purpose: reveal crises where human need is high but public attention is low—and turn evidence into action.

SDG 10 · SDG 16 · SDG 17

1 PROBLEM

- **High-need crises can remain nearly invisible when media coverage is disproportionate.**
- Journalists and NGOs manually reconcile fragmented, rate-limited humanitarian datasets.
- Slow discovery delays reporting, advocacy and funding attention.

EXISTING ALTERNATIVES

- ReliefWeb / OCHA dashboards
- Manual spreadsheet research
- Generic news alerts and ungrounded AI summaries

2 SOLUTION

- Daily multi-source ingestion
- Transparent attention-gap ranking and evidence trail
- Grounded, audience-specific brief generation
- Dashboard + Telegram + email delivery in one workflow

26 initial crises monitored

8 KEY METRICS

- Source freshness & success rate
- Crises scored and ranking coverage
- Brief generation and delivery success rate
- Active users, brief shares and downstream actions
- Data-to-brief turnaround time

3 UNIQUE VALUE PROPOSITION

Lumen reveals where humanitarian need is high but attention is low—then turns the evidence into a ready-to-share brief.

**One clear ranking.
Traceable facts.
Immediate outreach.**

Designed for action—not just another data dashboard.
Works even if the AI provider fails.

HIGH-LEVEL CONCEPT

“An attention-gap radar for humanitarian crises.”

Like a crisis early-warning system, focused on neglected attention.

4 UNFAIR ADVANTAGE

- Compounding historical score and raw-evidence dataset
- Auditable, versioned scoring instead of opaque ranking
- Source-specific adapters with graceful degradation
- Proven end-to-end delivery loop, not a static prototype

5 CHANNELS

- Public web dashboard
- Telegram bot and daily briefs
- Email digest and alerts
- Direct demos and outreach to newsrooms and NGOs
- Journalism schools and humanitarian networks

6 CUSTOMER SEGMENTS

PRIMARY USERS

- Journalists, editors and newsroom researchers
- NGO / UN humanitarian and advocacy analysts
- Donor, policy and grantmaking teams

EARLY ADOPTERS

- Small global-affairs newsrooms and independent journalists
- University journalism and humanitarian labs
- Crisis-monitoring and NGO communications teams

7 COST STRUCTURE

- Cloud hosting and storage (~\$24/month for the current deployment)
- Groq / Resend usage beyond free tiers; domain and monitoring
- Engineering maintenance, security updates and upstream API monitoring
- User research, newsroom/NGO onboarding and partnership outreach

9 REVENUE STREAMS / SUSTAINABILITY

- Free public dashboard to maximize humanitarian visibility and trust
- Team subscriptions for custom alerts, exports and historical analytics
- Institutional licensing / API access for newsrooms, NGOs and donors
- Sponsored regional monitoring, research grants and philanthropy
