

THE NEED

A visibility problem with real consequences

Humanitarian attention does not always follow humanitarian need. Severe displacement, large response appeals and major funding gaps may coexist with low media visibility. The evidence exists, but it is fragmented across specialist systems and difficult to turn quickly into a defensible priority or communication action.

1 Fragmented evidence

Teams manually reconcile humanitarian, funding and coverage datasets.

2 Delayed discovery

Slow comparison delays reporting, advocacy and funding attention.

3 Weak traceability

Generic alerts and AI summaries rarely expose a reproducible evidence trail.

PROJECT GOAL

Improve the visibility of under-reported humanitarian crises

Transform trusted public data into explainable prioritization and timely outreach.

OBJECTIVES

- Harmonize crisis, displacement, funding and coverage signals.
- Calculate an auditable, versioned Attention-Gap Score.
- Present rankings, trends, evidence and briefs through a public dashboard.

- Generate audience-specific briefs without invented statistics.
- Deliver priority findings through Telegram and email every day.
- Build historical evidence for research, evaluation and model improvement.

INTENDED USERS

Journalists & editors

News and story discovery

NGO / UN analysts

Advocacy and monitoring

Donor & policy teams

Priority and grant decisions

University labs

Research and teaching
